

The Republic of Slovakia started the year 2018 great change of e-health! All doctors are required to connect to E-Health without different age and connection options. E health is funded by the state. PDs do not have multiple connectivity options for Internet non-coverage or other issues. E- health has also been started with many mistakes. Some have survived until now. Our organization has succeeded in lifting fines for not joining this year. For many doctors it is a big problem .More hospitals have not connected yet. This makes it difficult for a PD to work. PDs do not see the benefits of e health now. The state paid large funds for e-health. The GP contributed only by a duty and a fine and no financial contribution.

The financial situation of ambulance doctors is very bad. All finance for PDs are from health insurance companies. Payments do not cover the real costs of one outpatient surgery . This makes a big difference between doctors in the hospital.

Age structure of doctors is very evil. This is also documented by the graph.

Postgraduate studies for GP are going very slowly. Its a big problem. It do not interest to be GP, a lot of work, it has a financial evaluation, low social application, a prospect of improvement

The current situation was with financial means, the growing obligations are the result of the outpatient GP's extinction this year. Since the beginning of the year, 15 outpatient offices have disappeared.

Currently, we are preparing a request for the Ministry of Health and the Ministry of Finance to speedily resolve the situation for the PD, improve PDP's financial standing and stop the termination of the PDs.
